

# Summer Transition Project

**VESPA**  
**Mindset**

## Animal Management

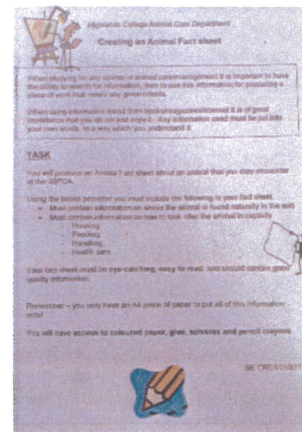

**You will be required to share your project with your Personal Tutor and class on day one**

**The Animal Management course at Highlands College includes the following topics –**

- Animal biology
- Animal health and welfare
- Animal accommodation, feeding and handling
- Animal anatomy and physiology
- Animal training
- Dog grooming

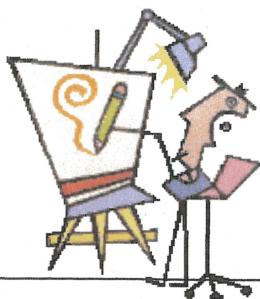

### Task:

- Please see the reverse of this sheet for your task
- You must bring this to college on your first day

**Your factsheet should be presented on the following:**

- ✓ One A4 piece of paper
- ✓ Using coloured pens and images

Highlands College Animal Care Department

## Creating an Animal Fact sheet

When studying for any course in animal care/management it is important to have the ability to search for information, then to use this information for producing a piece of work that meets any given criteria.

When using information found from books/magazines/internet it is of great importance that you do not just copy it. Any information used must be put into your own words, in a way which you understand it.

### TASK

You will produce an Animal Fact sheet about an animal that you may encounter at the JSPCA.

Using the books provided you must include the following in your fact sheet.

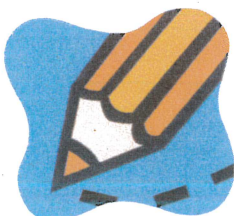

- Must contain information on where the animal is found naturally in the wild
- Must contain information on how to look after the animal in captivity
  - Housing
  - Feeding
  - Handling
  - Health care

Your fact sheet must be **eye-catching**, **easy to read**, and should contain good quality information.

Remember – you only have an A4 piece of paper to put all of this information onto!

You will have **access to coloured paper, glue, scissors and pencil crayons**

**BE CREATIVE!!!**
